

MICROSOFT EXCHANGE SERVER

Consulting & Implementation

dbvTECH

Do you have an old version of Microsoft Exchange and want to migrate to the latest version? We can assist your IT department or handle the implementation ourselves, with comprehensive Microsoft Exchange server implementation services. We can ensure your local and remote mail users get the scalability, reliability, security and performance they require. And, we can achieve that goal while avoiding or minimizing the disruptions normally associated with a Microsoft Exchange Server migration.

We specialize in:

- Microsoft Exchange Server installation
- Upgrades to [Microsoft Exchange Server 2003](#) & [Exchange Server 2007](#)
- Microsoft Exchange Server migration and customization services

MICROSOFT EXCHANGE SERVER READINESS ASSESSMENT

We will review your current environment, including the Windows 2000/2003 domain, network and SMTP architectures. Required changes or issues that may pose undue risk for the migration will be documented over the course of the assessment.

MICROSOFT EXCHANGE SERVER PLANNING, DESIGN & IMPLEMENTATION

We will analyze business requirements and map them to Microsoft Exchange Server capabilities. Then, the physical and logical design of the Exchange Server architecture will be defined along with the major tasks that will take place over the course of the installation, upgrade or migration project. If required, the service team will also review the current message environment, existing domains and the network architecture. We also install and configure Microsoft Exchange Server software and all relevant Microsoft Service Packs and Hot Fixes. The client connection to the server and a mailbox and the ability to send and receive mail to and from the server will be verified.

E-MAIL SERVER ARCHIVING & STORAGE ASSESSMENT

This service is designed to gather metrics on current usage profiles and data retention as well as gather usage metrics for servers and storage and network traffic. The information is then reviewed and recommendations on system configuration are developed based on performance results and the number of anticipated users.

MICROSOFT EXCHANGE SERVER TEST PILOT

Provides a practical approach to test concepts that may include customized applications, testing new versions and backup of the production environment. Based on the results of the pilot, the logical and physical designs of the Exchange Server architecture will be updated along with any special implementation activities.

Complete documentation and basic training will be conducted for the ongoing maintenance of the system.

Microsoft Exchange Server Support – dbvTECH offers flexible support plans targeted to meet the needs of help desk personnel or IT professionals, including on-site and telephone support.

dbvTECH also specializes in **emergency or rapid Microsoft Exchange Server upgrades**, when a customer's mail systems are down and a migration to a new server and Microsoft Exchange Server is the only option.
